best food apps canada: Food Tech Transitions Cinzia Piatti, Simone Graeff-Hönniger, Forough Khajehei, 2019-10-23 The food industry is now entering a transition age, as scientific advancements and technological innovations restructure what people eat and how people think about food. Food Tech Transitions provides a critical analysis of food technology and its impact, including the disruption potential of production and consumption logic, nutrition patterns, agronomic practices, and the human, environmental and animal ethics that are associated with technological change. This book is designed to integrate knowledge about food technology within the social sciences and a wider social perspective. Starting with an overview of the technological and ecological changes currently shaping the food industry and society at large, authors tackle recent advancements in food processing, preserving, distributing and meal creation through the lens of wider social issues. Section 1 provides an overview of the changes in the industry and its (often uneven) advancements, as well as related social, ecological and political issues. Section 2 addresses the more subtle sociological questions around production and consumption through case-studies. Section 3 embraces a more agronomic and wider agricultural perspective, questioning the suitability and adaptation of existing plants and resources for novel food technologies. Section 4 investigates nutrition-related issues stemming from altered dietary patterns. Finally, Section 5 addresses ethical questions related to food technology and the sustainability imperative in its tripartite form (social, environmental and economic). The editors have designed the book as an interdisciplinary tool for academics and policymakers working in the food sciences and agronomy, as well as other related disciplines.

best food apps canada: More Human Steve Hilton, Scott Bade, Jason Bade, 2016-04-26 People feel angry and let down by their leaders, as well as by the institutions that dominate their lives: political parties, government bureaucracy, and corporations. Yet the cause of this malaise, according to political -- advisor -- turned -- tech -- CEO Steve Hilton, is not being addressed by politicians on the left or the right. Hilton argues that much of our daily experience -- from the food we eat, to the governments we elect, to the economy on which our wealth depends, to the way we care for our health and well -- being -- has become too big, too bureaucratic, and too distant from the human scale. More Human sets out a radical manifesto for change, aimed at the root causes of our problems rather than just the symptoms. Whether it's using the latest advances in neuroscience to inform the fight against poverty and inequality, or applying lessons from America's most radical schools to transform our children's education, this book is an agenda for rethinking and redesigning the outdated systems and structures of our politics, government, economy, and society to make them more suited to the way we want to live our lives today. To make them more human.
