The Evolution of Smart Lighting: Embracing Group Control with Your Smart Lights App

group control smart lights app is revolutionizing how we interact with our home environments, offering unparalleled convenience and customization. Gone are the days of individually toggling each light; modern smart lighting systems empower users to manage entire rooms or zones with a single tap or voice command. This article delves into the sophisticated world of group control for smart lights, exploring its functionalities, benefits, and the underlying technology that makes it all possible. We will uncover how these intelligent applications simplify daily routines, enhance ambiance, and contribute to energy efficiency, making smart lighting an indispensable part of the modern connected home. Understanding the nuances of setting up and utilizing group control features will unlock the full potential of your smart lighting investment.

Understanding Smart Light Group Control

Group control for smart lights refers to the ability to manage multiple smart bulbs, fixtures, or strips simultaneously through a single command or setting within a dedicated application. Instead of manually adjusting each light in a room, users can create predefined groups, such as "Living Room," "Kitchen," or "Bedroom," and control all the lights within that group as a unified entity. This functionality is a cornerstone of a truly integrated smart home experience, offering a significant leap in convenience over individual control.

The underlying technology for group control typically involves the smart lights communicating wirelessly with a central hub or directly with your home network via Wi-Fi or Bluetooth. The smart lights app then acts as the interface, allowing you to assign lights to specific groups, define group settings, and execute commands. For instance, when you select the "Living Room" group, you can simultaneously turn all lights in that room on or off, adjust their brightness levels, or even change their color, depending on the capabilities of your smart bulbs. This seamless integration is what distinguishes advanced smart lighting systems.

The concept extends beyond simple on/off commands. Many smart lights apps allow for the creation of more complex scenes or routines that can be applied to groups. Imagine a "Movie Night" scene for your living room group that dims the main lights, activates accent

lighting, and sets a warm color temperature, all with a single activation. This level of personalization is a key driver behind the adoption of smart lighting solutions for both practical and aesthetic purposes.

Benefits of Using a Group Control Smart Lights App

The advantages of employing a group control smart lights app are manifold, significantly enhancing the user experience and the functionality of a smart home. Foremost among these is the substantial increase in convenience. Managing multiple lights individually can be tedious, especially in larger rooms or open-plan living spaces. Group control streamlines this process, allowing users to orchestrate entire lighting schemes with just a few taps or a voice command, saving valuable time and effort.

Energy efficiency is another critical benefit. By enabling the simultaneous control of multiple lights, users can easily ensure that lights are turned off when a room is unoccupied. Creating groups for specific areas and integrating them with motion sensors or schedules can automate this process, preventing unnecessary energy consumption. Furthermore, the ability to dim lights collectively within a group allows for fine-tuning brightness to meet specific needs, further contributing to reduced electricity usage and lower utility bills.

Beyond practicality, group control significantly enhances the ambiance and mood-setting capabilities of a smart home. Users can create dynamic lighting environments for various occasions, such as vibrant colors for parties, soft, warm light for relaxation, or bright, focused lighting for reading or working. These pre-set scenes, applied to entire groups, transform the atmosphere of a room instantly. This allows for a highly personalized and responsive living space that adapts to the user's lifestyle and preferences.

Key benefits include:

- Enhanced convenience and time-saving.
- Improved energy efficiency and cost reduction.
- Greater control over ambiance and mood.
- Simplified operation for multiple devices.
- Streamlined automation and scheduling possibilities.

How to Set Up Group Control for Smart Lights

Setting up group control for your smart lights typically begins with ensuring all your smart bulbs or fixtures are properly installed and connected to your home network. Most smart lighting systems utilize a dedicated mobile application provided by the manufacturer. This app is the central hub for managing your devices, including creating and organizing groups. The initial step often involves discovering and adding each individual smart light to the app.

Once your lights are recognized by the app, you will usually find an option to create new groups. This process is generally intuitive. You'll be prompted to name your group, for example, "Living Room Lamps" or "Kitchen Ceiling Lights." Following this, you'll be presented with a list of all the smart lights currently connected to your system. You then select the specific lights you wish to include in the newly created group. It's crucial to name your groups clearly to easily identify them later, especially if you have many smart devices.

After assigning lights to a group, you can then configure the group's settings. This might include setting a default brightness level, a default color temperature, or even a default color if your bulbs support full RGB customization. You can also set up schedules for these groups. For instance, you could program the "Hallway Lights" group to turn on at 50% brightness at sunset and turn off at sunrise. This automation further enhances the utility of group control, making your smart lighting work for you passively.

The exact steps can vary slightly depending on the brand and model of your smart lights and the app you are using. However, the general workflow remains consistent across most platforms:

1. Ensure all smart lights are powered on and connected to your Wi-Fi network.
2. Download and open the manufacturer's smart lights app.
3. Add each individual smart light to the app if they are not already present.
4. Locate the "Groups" or "Create Group" option within the app.
5. Name your new group descriptively.
6. Select the specific smart lights you want to include in this group.
7. Save the group.
8. (Optional) Configure default settings, schedules, or scenes for the group.

Advanced Features and Customization Options

Beyond basic on/off and dimming, a sophisticated group control smart lights app offers a wealth of advanced features and customization options that transform lighting from a functional necessity into an integral part of your home's atmosphere and automation. Many apps allow users to create "Scenes," which are pre-programmed lighting configurations for specific activities or moods. For example, a "Reading Scene" for a group of lamps might set them to a bright, cool white light at 80% brightness, while a "Relaxation Scene" could utilize a warm, dim glow at 30% brightness.

Scheduling is another powerful feature that leverages group control. Users can set specific times for groups of lights to turn on, turn off, change color, or adjust brightness. This is invaluable for simulating occupancy when you're away from home, waking up gently with gradually increasing light, or ensuring lights are off automatically at bedtime. These schedules can often be customized for different days of the week, offering a highly tailored experience.

Voice control integration is a significant aspect of modern smart lighting. When using a group control smart lights app, you can link your smart lighting system to virtual assistants like Amazon Alexa, Google Assistant, or Apple HomeKit. This allows you to control your light groups using simple voice commands, such as "Hey Google, turn off the living room lights" or "Alexa, dim the kitchen lights to 50%." This hands-free control adds another layer of convenience and accessibility.

Furthermore, some advanced apps support geofencing, which allows lights to react to your location. For instance, your outdoor lights could turn on automatically as you arrive home. Integration with other smart home devices and platforms through routines or automation triggers opens up even more possibilities. You could create a routine where your smart blinds open and your bedroom lights gradually brighten simultaneously, all initiated by a single command or event.

Consider these advanced functionalities:

- Customizable lighting scenes for various activities.
- Advanced scheduling with daily and weekly options.
- Seamless integration with voice assistants.
- Geofencing capabilities for location-based automation.
- Integration with other smart home devices for complex routines.
- Dynamic color and effect control for compatible RGB lights.

Troubleshooting Common Group Control Issues

While smart lighting offers immense convenience, occasional issues with group control can arise. One of the most common problems is a light or a group of lights becoming unresponsive. This can often be resolved by checking the basic connections: ensure the smart lights are powered on at the wall switch and that your Wi-Fi network is stable and functioning correctly. Sometimes, simply restarting your Wi-Fi router and then power cycling the affected smart lights can resolve temporary connectivity glitches.

Another frequent issue is that a light is assigned to the wrong group or is not appearing in the group list. In such cases, the solution usually involves going back into the app and managing your device assignments. You might need to remove the light from an incorrect group and re-add it to the correct one, or you may have to re-scan for devices if the app isn't recognizing a specific bulb. Ensuring the app is updated to the latest version can also resolve compatibility issues that might be causing lights to be missed or mismanaged within groups.

If a group command doesn't seem to be executing correctly for all lights within the group, it could indicate that one or more lights are out of sync or have lost their connection to the network. You may need to individually check the status of each light within the app. If a specific light consistently fails to respond to group commands, try performing a factory reset on that individual bulb and then re-adding it to your network and to the relevant group. This often clears any corrupted settings or connection problems specific to that device.

Persistent issues with group control might also stem from interference on your Wi-Fi channel or limitations in your router's capacity if you have a very large number of smart devices. If you are experiencing widespread problems, consider optimizing your Wi-Fi signal or, if your system supports it, using a dedicated smart home hub, which can sometimes offload some of the network traffic from your primary router. Always refer to the manufacturer's support documentation for your specific smart lighting system, as they often provide detailed troubleshooting guides tailored to their products.

Common troubleshooting steps include:

- Verifying Wi-Fi connectivity and router stability.
- Power cycling affected smart lights and the router.
- Checking for app updates.
- Re-assigning lights within groups.
- Performing factory resets on individual problematic lights.
- Ensuring lights are within Wi-Fi range.

The Future of Smart Lighting Group Management

The evolution of the group control smart lights app is far from over. As smart home technology advances, we can anticipate even more intuitive and powerful features. Future iterations will likely incorporate more sophisticated artificial intelligence and machine learning capabilities, allowing light groups to learn user habits and preferences autonomously. Imagine lighting that adjusts its color temperature and brightness throughout the day based on natural circadian rhythms, or automatically dims when it detects you're settling down to watch television, without explicit commands.

Enhanced interoperability between different smart home ecosystems will also play a crucial role. We can expect seamless integration of group control functionalities across various brands and platforms, breaking down the silos that currently exist. This means you could potentially manage a mixed collection of smart lights from different manufacturers within a single, unified app, creating truly holistic smart home lighting experiences. The focus will shift towards a more ambient, context-aware, and predictive lighting environment.

Furthermore, advancements in energy management will likely see group control apps become even more sophisticated in optimizing energy consumption. They might communicate with smart grids to adjust lighting intensity during peak demand periods, or integrate more deeply with renewable energy sources to intelligently utilize power when it's cheapest and cleanest. The user interface will undoubtedly become even more streamlined and user-friendly, abstracting away much of the technical complexity and focusing on delivering a natural, effortless experience.

The trajectory points towards smart lighting groups becoming not just controllable entities, but proactive partners in creating comfortable, efficient, and responsive living spaces. The group control smart lights app is poised to become an even more indispensable component of the intelligent home, anticipating our needs and shaping our environments in ways we are only beginning to imagine.

Q: What is the primary advantage of using a group control smart lights app?

A: The primary advantage is significantly enhanced convenience. Instead of controlling each individual smart light, you can manage multiple lights simultaneously within a room or zone with a single command or setting, saving time and simplifying operation.

Q: Can I control different brands of smart lights in the same group?

A: This depends on the smart lights app and the underlying protocols. Some apps and systems are designed for broader compatibility, allowing you to group lights from different manufacturers, especially if they integrate with common smart home platforms like Google Home, Amazon Alexa, or Apple HomeKit. However, it's best to check the specific app's

compatibility list.

Q: How does group control contribute to energy savings?

A: Group control allows for easier and more consistent management of lighting. You can set schedules to automatically turn off lights in unused areas or rooms, or quickly dim multiple lights simultaneously to reduce power consumption, leading to more efficient energy usage and lower utility bills.

Q: What are "scenes" in the context of group control smart lights apps?

A: Scenes are pre-programmed lighting configurations for specific moods or activities. For example, a "Movie Night" scene might dim all lights in a group to a low level with a warm color, while a "Reading Scene" could set them to bright, cool white. You activate a scene to apply all these settings to the lights in the group at once.

Q: Is it difficult to set up groups for my smart lights?

A: Generally, setting up groups is quite straightforward. Most smart lights apps provide an intuitive interface where you can name a group, select the lights you want to include, and save the configuration. The specific steps may vary slightly by manufacturer, but the process is designed to be user-friendly.

Q: Can I use voice commands to control my smart light groups?

A: Yes, absolutely. Most group control smart lights apps integrate with popular voice assistants like Amazon Alexa, Google Assistant, and Apple HomeKit. Once linked, you can control your light groups using simple voice commands, such as "Alexa, turn off the living room lights."

Q: What happens if one light in a group doesn't respond to a command?

A: If one light fails to respond to a group command, it typically indicates a connection issue with that specific bulb. You might need to check its power, Wi-Fi connection, or perform a factory reset on the individual bulb and then re-add it to the group.

Q: Can group control be automated based on time or

other events?

A: Yes, a significant benefit of group control is automation. You can set schedules for groups of lights to turn on or off at specific times, or even integrate them with other smart home devices and sensors through routines to trigger lighting changes based on motion, door openings, or your location (geofencing).

group control smart lights app: Smart Homes in easy steps Nick Vandome, 2018-08-17
Smart Homes in easy steps shows you how to start to take advantage of the current smart technology that is beginning to revolutionise the way in which we run our homes! The idea of a smart home - using digital devices throughout the home that can be controlled by digital voice assistants, apps, smartphones and tablets - is not a science fiction vision of the future: it is very much part of the here and now, and available to all. Also known as the Internet of Things (IoT), smart home devices can be used to automate tasks, save time and money, and to control devices in your home with a touch of a button - even when you are somewhere else. Smart Homes in easy steps takes the mystery out of all of the elements that are required to set up a smart home: it defines a smart home and shows what is needed to make a home smart: digital voice assistants, devices and apps. Initially, the book looks at the concept of a smart home and how it is now affordable and accessible enough for it to be a serious option for any household. Then, setting up items for a smart home is covered in detail - installing the devices, and also linking them to apps and digital voice assistants for controlling them. The book then examines the digital voice assistants that can be used in the home to control smart home devices, including detailed information about using the most popular options (and their related speakers): Alexa and the Amazon Echo; Google Assistant and the Google Home; and Siri and the Apple HomePod. The book then looks at specific areas of smart home devices, including installation and setup, and how to control them once they are up and running. Some of the areas that are covered in detail include: Smart lighting Smart heating Smart security systems Smart home cameras Smart locks Smart plugs Illustrated using Amazon Echo and Alexa; Google Assistant and Google Home; Apple HomePod and the Home app; and Nest. Smart Homes in easy steps is not a look into the future: it is a comprehensive yet concise, step-by-step guide on how to start transforming your home right now, using this exciting and now affordable technology - for smart learning! Contents: 1. About Smart Homes 2. About Digital Voice Assistants 3. Alexa and the Amazon Echo 4. Google Assistant and Google Home 5. HomePod and the Home app 6. Using Smart Devices 7. Smart Lighting 8. Smart Heating 9. Smart Security 10. More Smart Home Options 11. Looking Forward

group control smart lights app: Amazon Alexa Vijay Kumar Yadav , 2023-05-02 Alexa makes your life easier, more meaningful, and more fun by letting you voice control your world. Alexa can help you get more out of the things you already love and discover new possibilities you've never imagined. This is Alexa for everyone. Making Alexa part of your day is as simple as asking a question. Alexa can play your favorite song, read the latest headlines, dim the lights in your living room, and more. Basically, Alexa wants to make your life easier, more meaningful, and more fun by

helping you voice control your world—both at home and on the go. Alexa-enabled devices are simple to set up and use. The Amazon Alexa app is a quick, easy way to try Alexa on your phone, as well as set up and manage compatible devices. Stay connected and maximize your enjoyment with Alexa. In this book, Amazon Alexa, you see – Alexa Profiles, Alexa Smart Home, Alexa News, Alexa Information, Shopping with Alexa, Alexa Skills, Alexa Productivity, Alexa Entertainment, Alexa Communication, Talking with Alexa, Alexa Settings, Alexa Accessibility, Amazon Photos with Alexa, and Alexa in Education. Amazon Alexa, this is very easy eBook. You can understand easily. This eBook is for everyone.

group control smart lights app: Explainable IoT Applications: A Demystification Sachi Nandan Mohanty, Suneeta Satpathy, Xiaochun Cheng, Subhendu Kumar Pani, 2025-02-13 Explainable IoT Application: A Demystification is an in-depth guide that examines the intersection of the Internet of Things (IoT) with AI and Machine Learning, focusing on the crucial need for transparency and interpretability in IoT systems. As IoT devices become more integrated into daily life, from smart homes to industrial automation, it is increasingly important to understand and trust the decisions they make. The book starts by covering the basics of IoT, highlighting its importance in modern technology and its wide-ranging applications in fields such as healthcare, transportation, and smart cities. It then delves into the concept of explainability, stressing the need to prevent IoT systems from being perceived as opaque, black-box operations. The authors explore various techniques and methods for achieving explainability, including rule-based systems and machine learning models, while also addressing the challenge of balancing explainability with performance.

Through practical examples, the book shows how explainability can be successfully implemented in IoT applications, such as in smart healthcare systems. Furthermore, the book addresses the significant challenges of securing IoT systems in an increasingly connected world. It examines the unique vulnerabilities that come with the widespread use of IoT devices, such as data breaches, cyberattacks, and privacy issues, and discusses the complexities of managing these risks. The authors emphasize the importance of implementing security strategies that strike a balance between fostering innovations and protecting user data. The book concludes with a comprehensive exploration of the challenges and opportunities in making IoT systems more transparent and interpretable, offering valuable insights for researchers, developers, and decision-makers aiming to create IoT applications that are both trustworthy and understandable.

group control smart lights app: Alexa For Dummies Paul McFedries, 2021-08-02 Make your every wish Alexa's command with this in-depth guide to the wildly popular Amazon smart speaker. You might be thinking, "All I have to do is plug in my Echo device and start using it!" And you'd be right. But if you really want to explore what that compact little device can do, then *Alexa For Dummies* is your go-to resource. This book shows you how to customize your device to respond to your requests and enhance your life. *Alexa For Dummies* takes you on a tour of all things Alexa: its capabilities, tools, settings, and skills. Go beyond the basics of playing music, calling friends, reading the news, and checking the weather. You'll learn how to make Alexa private and secure, connect it to your smart home devices, and even make it sound like Samuel L. Jackson, if you feel like it. You can also extend its capabilities by adding new skills. Customize your device to respond to your voice. Troubleshoot when a light is signaling something's wrong. Add skills to play music and audiobooks. Create routines to turn on lights, adjust the thermostat, set your security alarm, and lock your doors. Sync your smart devices throughout your home. Use Alexa to connect to a Zoom meeting or phone call with your friends or family. No matter which device you have—Echo, Echo Dot, Echo Show, Echo Studio, Echo Flex, Echo Loop, Echo Buds, or Echo Frames—*Alexa For Dummies* is the perfect companion. Ready to get started? Say "Hey, Alexa, order *Alexa For Dummies*!"

group control smart lights app: Smart Service Systems, Operations Management, and Analytics Hui Yang, Robin Qiu, Weiwei Chen, 2019-11-25 This volume offers state-of-the-art research in service science and its related research, education and practice areas. It showcases recent developments in smart service systems, operations management and analytics and their impact in complex service systems. The papers included in this volume highlight emerging technology and applications in fields including healthcare, energy, finance, information technology, transportation, sports, logistics, and public services. Regardless of size and service, a service organization is a service system. Because of the socio-technical nature of a service system, a systems approach must be adopted to design, develop, and deliver services, aimed at meeting end users' both utilitarian and socio-psychological needs. Effective understanding of service and service systems often requires combining multiple methods to consider how interactions of people, technology, organizations, and information create value under various conditions. The papers in this volume present methods to approach such technical challenges in service science and are based on top papers from the 2019 INFORMS International Conference on Service Science.

group control smart lights app: IoT-WSN-DT Based Medical Systems and Nanotechnology for Smart Cancer Care Tuan Anh Nguyen, 2025-08-01 *IoT-WSN-DT Based Medical Systems and Nanotechnology for Smart Cancer Care* explores the latest advances in nanotechnology, artificial intelligence, Internet of Medical Things (IoMT), digital twin, and wireless sensor networks for real-time cancer care, enabling efficient decision-making and treatment. The book examines how data from medical nanosensors can be integrated with the technology of digital twins for cancer forecasting and monitoring, providing accessible smart insights via remote and mobile devices. By combining the strengths of smart nanotechnology, IoT-based platforms, WSN technologies, and DT, a powerful medical system can be developed for smart cancer care. This system can help in early diagnosis, targeted drug delivery, real-time monitoring, and personalized treatment, ultimately improving patient outcomes. - Covers how nanosensors and nanodevices can be used in cancer

forecasting, detection, and monitoring - Explores how nanomedicines and nanovaccines can be used in cancer treatment and diagnosis - Explains how digital twin, AI, and nanotechnology can be used for the future of cancer diagnostics and treatment

group control smart lights app: Autonomous Cyber Deception Ehab Al-Shaer, Jinpeng Wei, Kevin W. Hamlen, Cliff Wang, 2019-01-02 This textbook surveys the knowledge base in automated and resilient cyber deception. It features four major parts: cyber deception reasoning frameworks, dynamic decision-making for cyber deception, network-based deception, and malware deception. An important distinguishing characteristic of this book is its inclusion of student exercises at the end of each chapter. Exercises include technical problems, short-answer discussion questions, or hands-on lab exercises, organized at a range of difficulties from easy to advanced,. This is a useful textbook for a wide range of classes and degree levels within the security arena and other related topics. It's also suitable for researchers and practitioners with a variety of cyber security backgrounds from novice to experienced.

The 25 full and 11 short papers presented in this volume were carefully reviewed and selected from 66 full and 19 short papers. The contributions are organized in topical sections named: DSR in business process management; DSR in human computer interaction; DSR in data science and business analytics; DSR in service science; methodological contributions; domain-specific DSR applications; emerging themes and new ideas; and products and prototypes.

group control smart lights app: Advancements in Model-Driven Architecture in Software Engineering Rhazali, Yassine, 2020-09-18 An integral element of software engineering is model engineering. They both endeavor to minimize cost, time, and risks with quality software. As such, model engineering is a highly useful field that demands in-depth research on the most current approaches and techniques. Only by understanding the most up-to-date research can these methods reach their fullest potential. *Advancements in Model-Driven Architecture in Software Engineering* is an essential publication that prepares readers to exercise modeling and model transformation and covers state-of-the-art research and developments on various approaches for methodologies and platforms of model-driven architecture, applications and software development of model-driven architecture, modeling languages, and modeling tools. Highlighting a broad range of topics including cloud computing, service-oriented architectures, and modeling languages, this book is ideally designed for engineers, programmers, software designers, entrepreneurs, researchers, academicians, and students.

group control smart lights app: My Smart Home for Seniors Michael R. Miller, 2017-06-19 Winner, Bronze Award, APEX 2018 and 2018 INDIES Book of the Year Honorable Mention/Health This full-color introduction to the smart home has been written from the ground up with one audience in mind: seniors. No ordinary beginner's book, *My Smart Home for Seniors* approaches every topic from a 50+ person's point of view, using meaningful, realistic examples. Full-color, step-by-step tasks-in legible print-walk you through making your home safer and easier to live in using smart technology. Learn how to: • Control your home's lighting with smart bulbs and switches • Make your home more secure with smart doorbells, door locks, and security cameras • Automatically control your home's temperature with a smart thermostat • Make cooking and cleaning easier with smart appliances • Use voice commands or your smart phone to control your smart devices • Use If This Then That (IFTTT) to make your smart devices interact with each other automatically • Get smart about the security and privacy concerns of smart devices • Set up your smart devices and get them to work with one another • Compare and select the best smart hub for your smart home needs • Learn to use Amazon Alexa™, Google Home™ and other voice-activated devices, as well as Apple's HomeKit™ on the iPhone, to make your smart devices work together

group control smart lights app: Competitive Digital Innovation Amit Basu, Steve Muylle, 2023-05-16 Innovative digital technologies are forcing companies to rethink how they compete. The focus of digital innovation in business has shifted from internal transformation within firms to their market interface and ecosystems. While opportunities for innovation in internal operations are well established, it's less clear how to leverage technology at the market interface. This often has strategic implications, and the goal of this book is help you connect digital innovation to business strategy. By understanding how to leverage digital technologies, you can redefine your market-facing business processes, your products, services and even your business models and stay competitive in today's hybrid markets. This book provides a coherent and comprehensive approach to not just survive but rather thrive in the 21st Century global marketplace. With global, real-world examples and original frameworks, this is an ideal book for executives and anyone who wants to understand digital strategy. Highly practical but infused with rigorous research, it shows you how your business can use digital technologies to compete in today's hybrid markets.

group control smart lights app: Lighting Technology Meike Barfuss, Alexander Rosemann, Dirk Seifert, Werner Osterhaus, 2024-12-22 *Lighting Technology* offers a comprehensive and

complete overview on the field. It is a translation of the 5th edition of the German textbook *Beleuchtungstechnik* by Huss Media, Berlin. It introduces the fundamentals of lighting technology and discusses concepts for good lighting and daylighting design. This book is widely used in German universities and has already helped generations of students to graduate and kick-off their professional career in the field of lighting. Valuable contributions to this book came from a group of well-established lighting experts consisting of academics and design professionals. It covers the following key aspects: Fundamentals of Lighting Technology, Light Sources and Auxiliary Devices, Luminaires, Lighting Control, Illumination with Daylight, Illumination Systems for Interior Spaces, and Illumination Systems for Exterior Spaces. The motivation for this book was initiated in National lighting associations including but not limited to the German LiTG, the Dutch NSVV and the Intelligent Lighting Institute ILI of Eindhoven University of Technology with the goal to transfer expert knowledge to everybody interested in broadening his knowledge in the field of lighting technology and illuminating engineering, like university students, researchers and lighting designers. It is suitable to serve as a supportive source of knowledge and reference when studying lighting technology or pursuing a professional qualification as ELE (European Lighting Expert) offered by ELEA, the European Lighting Expert Association. The book provides all the knowledge necessary for working on and successfully completing innovative lighting projects.
